

The semester long "Math 325 Notebook Organization" assignment (as explained in your Course Syllabus in I-Learn) requires you to customize your Table of Contents page of your Math 325 Notebook in such a way that it has become useful to your current and future self. Remember, this assignment is worth 5% of your final grade.

Hopefully you are making progress on your organization and customization of the Table of Contents page, but if not, now is a great time to start. The goal of this page is to have a high level guide on what type of analysis to perform when you have certain types of data. It should include many links to areas of the textbook. For example, some useful links you should probably have under the "1 Quantitative Variable" section of your Table of Contents page are:

[One Sample t Test](tTests.html)

[Signed-Rank Wilcoxon Test](WilcoxonTests.html)

[Histogram, Boxplot, or Dotplot](GraphicalSummaires.html)

[Mean, median, five-number summary, standard deviation](NumericalSummaries.html)

It would also be appropriate to have brief notes and comments instructing your future self with hints and tips on what to do to correctly analyze data. You can use the provided structure of the Table of Contents page, or completely rewrite it to better fit your needs. You just have to show that you have made the page useful to your *current* and *future* self.

Go ahead and spend a few minutes working on your Table of Contents.

Then, email your instructor a single screen shot showing the work you have done on your Table of Contents page so far.

- ☒ I have emailed my instructor a screen shot of my "Table of Contents" page of my Math 325 Notebook. It shows some of what I have been doing to customize this page.
- ☐ I don't have anything worth showing my instructor yet. I will go get help from my instructor on how to customize my Table of Contents page.
- (Once you do, they can award you full credit for this question.)
