YAHOO HACK- SYSTEMS SECURITY CLASS
TEAM TROJAN

Agile Methodology – With this approach we use mini phases to define, build, test and release project deliverables.

Project Scope

Objective
Gather all facts about the Yahoo Hack in 2014-2016 and present them to the CIT 270 audience.

Goals
Assign each team member a topic to work on to be included in the presentation.
We need to meet up twice after we have all worked on our individual parts of the presentation document.
We need to have our presentation report done in 3 days and ready to submit to our instructor.
We all need to make sure that we have access to the google document with the outline so we can edit with any new information we find as we work on our assigned parts of presentation.

10/24 – Google Document created, and each team member is assigned a portion to work on.
10/26 – Meet up to go over the details of what we all have researched so we can explain our findings.
10/28- Make final edits and then submit our report by 10PM.
10/30- Make changes based on the comments from the instructor and then resubmit it the same day with our changes based on the instructor's feedback.

10/31 – Meet up as a team to put our presentation together and rehearse our different parts of it so we are good to present on 11/05

Tasks
- Tyler Israelsen- work on the executive summary of the report
- Chloe Huang – work on the detailed report part
- Samuel Osekeny- gather all the videos supporting this topic and choose which ones will be the best plus be in charge of editing the slides and making sure that everything works perfectly fine.

Resources
- YouTube videos
- Google search

Schedule

- 10/24 – Project initiation (Google document created and brainstorming ideas on how to go about the report and presentation)

- 10/26 – Make sure we all have our parts well researched and meet up so we can go over each individuals part.

- 10/28 – Submit detailed report by 10PM
- 10/31 – Make changes and if needed resubmit with changes included after the instructor's comments on our rough draft.

- 11/05 – PowerPoint presentation to the CIT 270 audience (stake holders).

Project Deliverables:

Presentation about the Yahoo Hack that affected over 1 billion Yahoo user accounts in 2014-2016.

LEARNING EXPERIENCE AS A PROJECT MANAGER

- Working the Agile Method, you want to release things super-fast.
- Agile methodologies are easily adaptable to changing requirements for example how easy it was when we got feedback from our instructor(stakeholder) and we were able to apply the changes real fast.
- I learned doing this project that we had to test our pieces all the time and if there was any things that didn't matchup or didn't work well(fails) then we were able to fix it easily.
- Since we had a lot of face to face communication to emphasize how we wanted to get things done which also helped us have a quick which is a great aspect of collaboration in an agile methodology style of project management.
